Harman List 2107 Project

Harman Tiwana

December 11 2020

Project Scope

My product, HarmansList is a basic marketplace listing site just like Craigslist. The main target audience are young adults and adults. The problem that it is solving is fast ways to sell things online smoothly and efficiently. No ADS and no unnecessary things on the website. There are plenty of similar systems on the market such as Craiglist, Facebook marketplace, Fiverr and much more. This website will be very different from others because it is much simpler and not a hassle to navigate. The major features of my software will of course being able to login and register, create and delete a post, update an avatar and also reporting a post. The login and register system is a simple UI for the user that will make them register in an instant. The create and delete post feature provides the user with the option to create a post and delete it as well. The report post feature gives the user the ability to change their avatar so that other people on the site will have a sense of how you look!
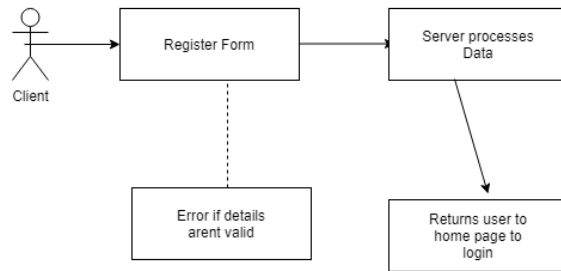

Group Dynamics

The team leader is me (Harman) as I am the only one in the group. I will be taking care of all the documentation, the coding, designing etc.
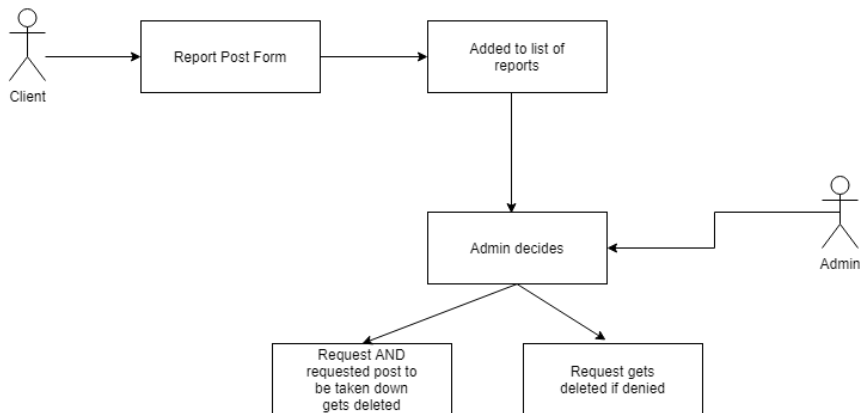

Use Cases

Login Feature Use Case

Client

Login Form

Server processes Data

Error if details arent valid

User gets redirected to home panel

View gets rendered for user

Register Feature Use Case

Report Post Feature Use Case

Software Toolset
I will be mainly using Javascript, HTML, CSS and 2 frameworks, Express and Node.js. Site will be put under git version control and I wont be using any bug tracking software.

Meeting Minutes
Since im by myself, I will have a quick summary of things that I had got done since previous class.
